

Versa Green Protects

Society has become increasingly concerned with the health of our natural environment. We at Hardware Specialties are doing our share to help protect and preserve the environment while helping clients like you protect your store fixtures at the same time. That's why we've introduced the VersaGreen product line.

Manufactured from quality stainless steel, VersaGreen products are 100% recyclable. This means that after a long life of use and helping protect your valuable store assets, the stainless steel products can be 100% recycled, ensuring that both Hardware Specialties and you are doing our share to help protect and preserve the health of our environment.

All VERSAGREEN products come standard with a satin stainless steel finish, ensuring that your store maintains a consistent look from front to rear. Additional powder coat colors are available.
